

Classes and Objects in Java | Lesson 2

Practice: Simple Classes

Instructions

Fork the [Java Classes and Objects 2](#) project from github into your own account, clone it to your local machine, and complete the exercises as described in the README.md file. When you are finished, commit and push your changes to your forked repository.

Exercise Summary:

In this exercise, you will use simple java classes to create an improved StudentManager called BetterStudentManager. You will need to create a Student class to represent a student, and you will need to complete the methods in the BetterStudentManager class to manage a list of students.

Setup

Make sure you follow all of these steps when you complete work in our GitHub repos:

- Fork the repo.
- Clone the repository to your local machine.
- Start working on the code.
- When you are finished, commit your changes and push them to your fork.

Submission

Submit the url for your GitHub repo in the field below.
